HEAVY DUTY CUTTING & HIGH ACCURACY

MAIN SPINDLE

Specialized in High-speed and Rough Cutting

The 6" main spindle is designed for high-speed machining by applying two and three-row ball bearings to the front and rear, respectively. In addition, the 8" and 10" main spindles are designed to match the rigid spindle structure by combining the double-row roller bearing and the angular contact bearing, which provides excellent performance for heavy-duty cutting.

Moreover, we applied the ribstar belt to minimize the slip and noise of the belt during processing, and this improvement enhanced performance of the work and increased processing stability by minimizing bearing damage caused by inflow of the oil.

10 inch	-	-	549 (21.6")	499 (19.6")	Ø81 (Ø3.2")

C-axis Control for All Models

The SE Series 'M/Y' Type (featuring a mill turret) can control the C-axis by 0.001°, and the SE Series (featuring a turning turret) can control the C-axis by 0.03°.

SUB SPINDLE ('S' Type)

The Belt-type sub spindle is designed to minimize thermal displacement during the continuous machining, offering from the heavy-duty cutting to the high-speed machining. When the main spindle cutting is completed, the sub spindle rotation is synchronized with the main spindle allowing the workpiece to be transferred to the sub spindle, and machining can begin on the back side of the workpiece.

04 USER CONVENIENCE

Various Devices for User Friendly

HYDRAULIC NC TAILSTOCK

Hydraulic NC Tailstock with Position Control (Long Type Std. / Standard Type Opt.)

The hydraulic NC tailstock applied to the SE series enables independent transfer through a program independently of the turret movement and it simultaneously achieved "Improvement of user convenience" and "Reduction of cycle time".

Hydraulic NC Tailstock
(Std.)

- > Structure in which the tailstock moves independently from the turret (Position control : 0.1mm)
- > Stabilization of tailstock body hydraulic pressure
- > Turret moves independently while the tailstock moves to reduce machining setup time
- > Long type standard application (MT#4 live center application)

Programmable Quill Tailstock
(Opt.)

- > A structure that moves by fixing the tailstock to the turret
- > After fixing the tailstock, the quill operated by hydraulic pressure advances to stabilize the material
- > High rigidity tail spindle and enhancement in thrust
- > Suitable for workpieces subject to vibration during machining and heavy machining load

HW-TMS (TAILSTOCK OPERATION)

This software is capable of manipulation and data management of tailstock operations through intuitive GUI.
